

About FSM

FSM is a specialist sheet metal fabrication company based in Haverhill, Suffolk. Today it operates from a 14,000 sq ft factory that offers a comprehensive service for both general sub-contract sheet metal manufacturing and the security door and access control industries.

We have offered design, manufacture and supply of access control and security products since 1982. Our range was originally developed primarily for the municipal market in the fight against vandalism and anti-social behaviour but has now progressed into the commercial sector as well.

About FSM

Access Control Products & Panels

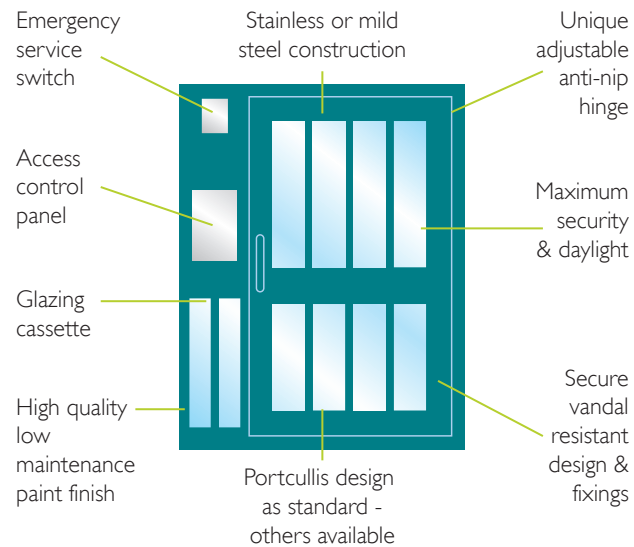

FSM has a standard range of access control products and panels. The majority of the access control panels are made to the client's specification, including the number of buttons, paint colours, engraving and braille if required.

Our access control panels are typically manufactured from weather resistant 316 stainless steel and can incorporate our own FSM developed standard or DDA compliant pushbuttons as well as proximity readers, cameras and sounders. Engraving, laser etching and braille are all undertaken 'in house' and are regular features on our panels. Should you require a bespoke panel to incorporate something different, we would be happy to produce a special.

Security Doors & Screens

Typically bespoke, our security doors and screens are manufactured from high quality mild steel. Our doors are then zinc phosphate primed and powder coated to a very high specification for optimum weather resistance. Stainless steel doors can also be supplied.

Our door glazing panels are normally supplied in shatterproof polycarbonate. We can also supply toughened glass or any other glazing medium if required.

Secure Gate Systems

Gates are typically made to your designs incorporating your preferred features and finishes. Manufactured in mild steel, gates are produced to fit a specific opening or entrance. All of our gates can include security access panels, locking systems and automation.

Full supply and installation can be provided.
